

## GRIMME Skandinavien present our new partner within ventilation and cooling systems

Rødkærsbro,  
March 20 - 2019

It was with regret that we received the announcement that our long-standing partner AgroVent went bankrupt in December 2018. But we, at GRIMME Skandinavien A/S, have a strong desire to maintain our leading role in the sales of cooling and ventilation in the four Nordic countries.

We have worked decisively to ensure our customers the best solutions for the future. It is therefore with great pleasure that we can present our new partner within ventilation and cooling systems.

TOLSMA will be GRIMME Skandinavien A/S strong business partner in the future.

TOLSMA has for many years been Europe's largest supplier of ventilation and cooling technology for onion, potato and carrot growers. TOLSMA is merging Bo R. Adolfs-son Consulting AB activities in Sweden & Norway into this cooperation model. Bo R. Adolfs-son will remain in his position and will continue his activities. As a result, this cooperation with GRIMME Skandinavien A/S will strengthen both parties leading position in the Nordic's, as the preferred supplier for storing high value crops.

Furthermore, TOLSMA is worldwide active as a total solution provider for growers, packers and industry. TOLSMA's presence in the Swedish and Norwegian market is already lasting more than 25 years and maintains a large installed base. By combining strengths both parties are convinced that this will result in better service, solid and

robust solutions for ventilations and cooling.

As a result, this leads to a higher yield for the growers.

With this new cooperation with TOLSMA we are also able to supply you with new future proof installations that include refrigerants as e.g. propane, new high-tech ventilators, chillers and condens-drying technology. For this latest technology we will also work intensively with Mr. Per Guldbrand, the inventor of the VaccTek condens-dryer. You can expect more combined demonstrations and shows resulting in more information close to you. This results in quicker service due to the utilization of both warehouses.

Of course, we will continue our good cooperation with SERCOM on control units for warehouses that do not require refrigeration. TOLSMA has for many years retro-fit solutions in order to convert systems and make use of the available APP's in order to control cooling and ventilation in one. We will continue to supply Mixed-air solutions, as well as service and spare parts for all our existing plants.

In the course of the next weeks we will inform you more in detail how this cooperation will look like.

GRIMME Scandinavia's strong team for storage and cooling solutions looks like this:

**Kiljan Pingel:**  
Refrigeration specialist and techniques.

**Arjen Baars:**  
Specialist in warehouse solutions after more than 30 years in the refrigeration industry.

**Palle Foged:**  
Design, sale and follow-up of new and existing plants.

**Heine Hylleberg:**  
Lecture on storage of high value crops.

**For further information,** please contact Heine Hylleberg at +45 4028 1376 or [hh@grimme.dk](mailto:hh@grimme.dk)

*Best regards*

**Kiljan, Arjen, Palle og Heine**
